The Beauty Parlour's Waxing Guidelines

When not to wax:

*If you are using any topical products containing GLYCOLIC ACID, RENOVA, RETIN-A, KENERASE, ACCUTANE OR RETINOL, you may not receive a waxing treatment on the face.

*If you are under 18 years of age, and do not have parental consent.

*If you have had exposure to sun or to tanning beds for 24-48 hours before waxing .

*If you have had application of sunless tanning, or will be receiving sunless tanning 24 before or after your waxing service. (Please allow 48 hours for sensitive skin.)

*The skin is usually most sensitive the day's surrounding a woman's menstrual cycle. If you have just begun hormone replacement therapy or are taking antibiotics, you may notice your skin to be more sensitive. We advise you to avoid waxing until your body adjusts to the medications you are taking.

*Waxing also should not be done if any of the following conditions are present: Varicose veins, sunburned skin, chapped skin, eczema or new scars. Communicate even the slightest change or concerns you may have before treatment.

Initial _____

Sensitivity:

*Irritation consisting of redness and slight swelling is a very common side effect of waxing and is to be expected. Some other types of irritation consisting of severe redness and swelling, hives, dry skin patches, bruising, ingrown hair and sensitivity to touch can occur in clients with more sensitive skin types. Small red dots often occur after the treatment and could stay for up to 48 hours. This is considered to be normal on sensitive skin and/or on clients with coarse hair.

Initial _____

Brazilian and Bikini waxing:

*Please be advised that the vagina, genitals and surrounding areas are extremely sensitive and are not intended to be waxed. Possible side effects of this service include: extreme tenderness, swelling bruising, redness and the possibility of burns, skin removal and bleeding. Understand that the greatest of care will be provided, but The Beauty Parlour and its associates will not be held responsible for any repercussion associated with this service.

Initial _____

After Your Waxing Service

*Avoid applying any makeup and lotions until the skin has calmed down.

*ALWAYS use sun protection containing UVA & UVB protection with an SPF 15 or higher before any exposure to sun or florescent lighting on the skin after the area has calmed down. Sun protection must be reapplied throughout the day for it to maintain its effectiveness.

*Do not swim in chlorinated water the day before or after waxing services, or for two days before and after if your skin is generally sensitive. Chlorine will dry out and irritate the skin.

*Avoid exposure to sun or to tanning beds for 24-48 hours before and after waxing.

* Waxing may diminish the appearance of sun tanning to the area that has been waxed. Most often noticeable when a sunless surface tanner is being used.

*Avoid friction, including intercourse, shaving, etc. to the area for 24-48 hours after waxing.

*If you find the waxed area remains irritated and red after 4-6 hours, then apply:
Soothing moisturizer, Neosporin (avoid anything with fragrance),
Cold, wet compress
Benadryl cream or oral antihistamine

Initial _____
